

LSC1.4 230V,110V, 50Hz

Ideal for removal of residual water down to 1mm - for professional use

Original residue dewatering pump capable of pumping down to floor level. Even the smallest puddle can be pumped dry.

Ideal for complete drainage of flat surfaces where a sump is not available: rooftops, parking lots, garages, roadways, pools,.....

Features:

- Double mechanical seal with lapped SiC rings in oil bath, as used in large heavy-duty pumps
- When placed directly on a hard surface, strainer allows water to be removed down to 1mm
- A peripheral diaphragm type check valve right above the strainer prevents loss of water when the pump is lifted or stopped
- The pump's bottom plate has rubber all-around it, it cannot damage delicate surfaces

Pumped water cools the motor and discharges as illustrated. The motor can be cooled even when pumping a small amount of water. The top discharge arrangement allows access into areas with space limitations.

The pump can be run continuously in air.
